

GULF LINK TRANSPORT COMPANY (KGL)- KUWAIT

**19,000+ KM OIL DRAIN INTERVAL LIFE ACHIEVED USING
DELO GOLD ULTRA SAE 15W-40 & CALTEX LUBEWATCH PROGRAM**

THE CLIENT

KGL is the premier provider of Integrated Supply Chain Management services in Kuwait, fulfilling the transportation, logistics, port management, shipping and freight forwarding needs of countless clients.

THE CHALLENGE

KGL needed a high quality diesel engine lubricant to increase the oil drain interval from 10,000 km to 19,000 km while maintaining engine durability for a fleet on-highway buses. In order to save money the test was done in two phases:

THE RESULTS

Kuwait Gulf Link Co-KGL benefited by reducing fleet downtime, reducing man-hours and getting overall cost reduction on lubricants, filters and maintenance, and by increasing engine durability.

**↑ PHASE 1
50% ODI**

A selection of buses were converted to Delo Gold Ultra and continuously monitored every 2500 km. In the initial phase the engines ran up to 15000 km rather than the usual 10000 km. This phase demonstrated a 50% increase in ODI. The engines were cleaned from the inside with ISOSYN technology used in Delo Gold Ultra SAE 15W-40.

**↑ PHASE 2
90% ODI**

This phase saw an increase in the oil drain intervals across the on-highway fleet from 10,000 km to 19,000+ km, with a top up of 0.5 litres of Caltex Delo Gold Ultra SAE 15W-40.

“We were using a competitor’s diesel engine oil for many years. However, when we shifted to Delo Gold Ultra SAE 15W-40 API CI 4, we saw our fleet’s ODI increase by up to 90%”

**Engineer Mohammed Mirza,
KGL Kuwait.**
